

Algorithm Parsing Configfile

i skim the file by applicated these rule,
the purpose is to have syntax similar
to nginx

Token_type:

{	= 1
}	= 2
Server	= 3
Location	= 4
;	= 5
name	= 6
Value	= 7
initialized	= 8

variable "previous" will contain
the values of this enum

START

Token_type previous = initialized
this variable stocke the previous token
type
